# Behind the Lines

The past few months have been busy, exciting times at MCG. The arrival of a new dean for the School of Medicine, the Augusta Campaign, the beginning of a campaign in Albany, election of new alumni officers, and a number of other events indicate just how much change and growth continue at MCG.

The College is fortunate to have obtained the services of Dr. Fairfield Goodale as the Dean of the School of Medicine and Medical Director of the Hospital and Clinics. He and his wife, Mary Margaret, have met many alumni during the Jekyll Island MCG meeting and at the recent Albany Regional Dinner meeting.

We enjoyed having them with us at the Rome Regional Dinner on May 26 and at many other alumni events yet to be announced.

Dr. Floyd Jarrell is to be commended by all for the exceedingly fine job he did as President of the Alumni Association last year. It's good to know he will continue on the Board of Managers and that he also continues his term of office as a Trustee of the Foundation. We look forward to working with Dr. Woodrow Goss of Ashburn as we continue the exciting and revitalized programs of the Alumni Association. Dr. Goss has announced as one of his goals, 1,000 paid members in the Alumni Association by the end of his term. The Division of Institutional Relations staff pledges to assist him in achieving this goal. I wish to express appreciation to the School of Medicine Alumni Association for the generous grants to the Sesquicentennial Endowment Fund designated for the Sydenstricker Professorship Fund and the Edgar R. Pund Pathology Fund.

We welcome Drs. Stuart Prather and Lamar McGinnis to the Board of Managers.

At the annual meeting of the MCG Foundation Trustees at Jekyll Island on April 10, we reported that the total assets of the Foundation as of March 1, 1976 amounted to $1,216,158. This is an increase of $473,325 over the assets reported one year ago.

Total gifts and pledges received in the Campaign as of April 5, 1976 amounted to $1,070,226. Alumni have reached $348,499 toward their $700,000 goal.

All friends of the Medical College join me in expressing deep appreciation to Mr. Charles Presley and his Augusta Steering Committee for the fine job they did in helping us raise nearly $400,000 in Augusta.

As of this writing, we have just kicked-off the Campaign effort in the Albany area with real vigor. Drs. Robert Waller, Joe Berg, Bill Lowery, Frank McKemie, Zeb McDaniel and Dan Batemen are leading out in the alumni phase of this Campaign with a $75,000 goal. President's Advisory Council member, John T. Phillips, Chairman of the Board of the Lilliston Corporation, is heading up the effort in the non-medical community. Similar programs have been started in Columbus and Rome.

In the interest of promoting the Sesquicentennial Campaign, Dr. Frank McKemie, at a recent breakfast meeting in Albany, quoted the following from the Hippocratic Oath, . . . "TO RECKON HIM WHO TAUGHT ME THIS ART EQUALLY DEAR TO ME AS MY PARENTS •TO SHARE MY SUBSTANCE WITH HIM •& RELIEVE HIS NECESSITIES IF REQUIRED . . ."

We are grateful for our loyal alumni who endeavor to make MCG greater each year.

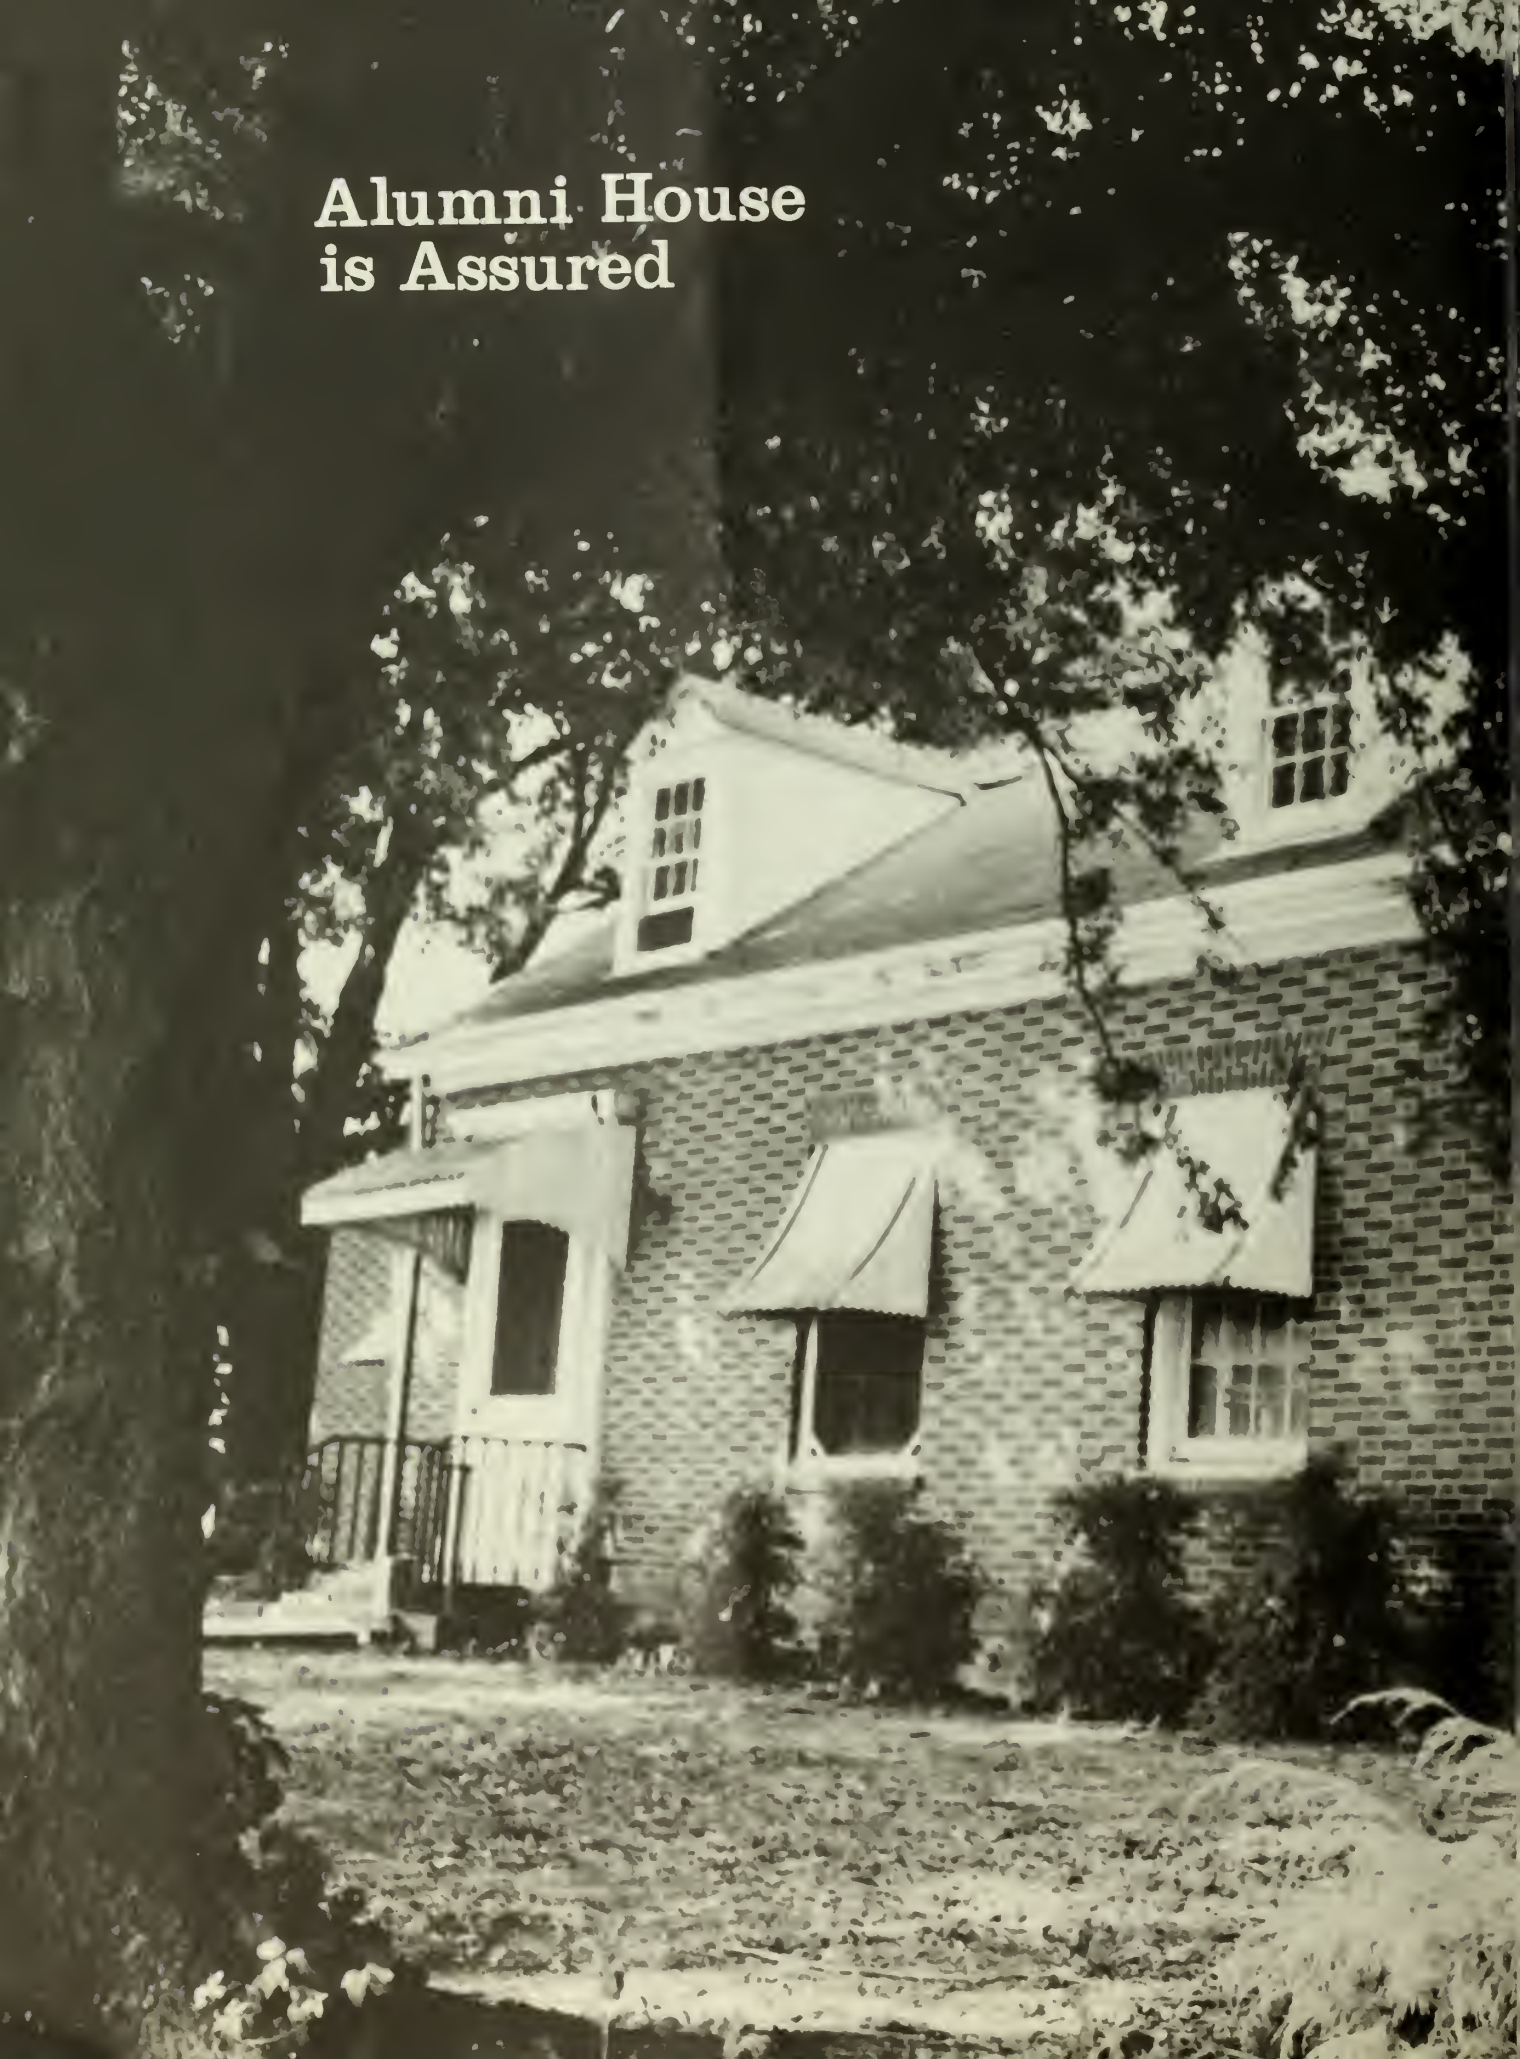
# Alumni House is Assured



Renovation of a building to be used as an alumni center on the MCG campus is expected to be completed by late summer of 1976, announces James C. Austin, director of the Division of Institutional Relations.

The former superintendent's residence, adjacent to the old University Hospital, is being renovated at a cost of $26,340 to provide office space for alumni and MCG Foundation, Inc. work as well as providing social areas for visiting alumni and for small group meetings.

The late Dr. G. Lombard Kelly, president of MCG, and his family were the first residents of the home. The two-story brick structure has not been used for years and requires a new roof, a heating and cooling system, new lighting and electrical wiring and other renovations.

Parking will be provided for visiting alumni. Cards to operate the gate controlled parking areas will be provided to dues paying members of the five alumni associations.

Planning for the center began in February of 1974 when the president of the School of Medicine Alumni Association, Dr. Robert Waller of Albany, asked the association to vote $5,000 to begin work.

The $5,000, combined with State funds, helped get the project underway. Planning continued on the project during the terms of office of Dr. George Green of Sparta and now Dr. Floyd Jarrell of Columbus. Dr. Dan Sullivan of Augusta has been chairman of the committee since 1974.

Dr. Sullivan's wife, Anne Kelly Sullivan, is the daughter of Dr. and Mrs. Kelly, so there is a particular interest by this family in renovation of the building.

The alumni association voted an additional $2,600 recently for the project which has been low bid at $42,670. Cost reductions by Hughes and Beattie Architects of Augusta reduced cost to $26,340. State renovation monies have made the difference between alumni contributions and the final cost.

Low bidder on the project is the DeKalb Construction Co. of Augusta.

# Dr. Richard Torpin Remembered

EDITOR'S NOTE: Dr. Richard Torpin, professor emeritus of obstetrics and gynecology, died February 6 at the age of 85. Dr. Torpin was with the Medical College for 22 years, serving as chairman of the Department of Obstetrics and Gynecology from July, 1936 until his retirement in 1958.

In the following article, Dorothy H. Mims, associate professor, MCG Library, and a friend of Dr. Torpin, recalls his accomplishments.

With the death of Dr. Richard Torpin the Medical College of Georgia lost another member of "the old guard." His tenure began in the lean days of the Depression, and he lived to see the institution expand in numbers and budget in an unprecedented manner.

Dr. Torpin was born in Oakdale, Nebraska in 1891. He received a Bachelor of Arts degree from Nebraska Wesleyan College in 1913, a Bachelor of Science degree from the University of Chicago in 1915 and his M.D. degree from Rush Medical College in 1917. He served in the U.S. Army Medical Corps during 1918 and 1919. After seven years of rural practice in his native area, he returned to Rush, where he was on the clinical faculty from 1931 to 1936. He came to the Medical College of Georgia in 1936 as professor of Obstetrics and Gynecology, serving as head of the department until reaching the manadatory age for retirement in 1958. In his typical dynamic fashion, Dr. Torpin did not go off to fish and meditate. He spent his first year as head of the Department of Obstetrics and Gynecology at the University of Shiraz in Iran. He then returned to Augusta and the Medical College in an emeritus position to continue many of his activities which had made him one of those unusual members of the faculty in the history of the Medical College.

As a teacher, he had been dynamic and demanding. To give the students and residents additional training in obstetrics, he had, around 1940, organized "The Stork Club." Not a night club in the sense of the other institution by that name, it was a new way of giving medical care which benefitted both students and patients. At a time when many babies were delivered at home by midwives because families could not afford hospital and medical costs, Dr. Torpin arranged to have patients brought into a clinic in the old Newton Building (which stood near the present site of the new University Hospital.) There delivery was accomplished under far

more satisfactory conditions than those encountered in the home, and students were able to participate under teaching conditions. Mothers and babies were kept there until it was determined that there were no complications. They were then sent home by ambulance. The total cost to the patient was ten dollars. This continued for many years, and there are a number of obstetricians still in practice who received part of their training at "The Stork Club."

Dr. Torpin also encouraged his students to open their eyes to research, an activity often neglected by busy obstetricians. During his years at the Medical College, Dr. Torpin began extensive research on the placenta, examining well over 1,000 specimens through the years. He found that by suspending the placenta in water, he could reconstruct the prenatal environment and explain many abnormalities in infants which were the result of the condition of the placenta. He often told of examining one placenta and predicting from its condition that the child would have club feet and amputations or constrictions of the digits or extremities. Unable to wait until morning to check out his prediction, he looked up the records for the address of the mother and drove to the outskirts of town on a Sunday night to examine the child. The baby, as predicted had club feet and amputations. For a number of years Dr. Torpin had a standing offer to pay fifty dollars for the placenta from any child delivered with congenital abnormalities.

A condition which he studied in depth was that of amputation or constriction of the digits or extremities. He had found string-like fibers in some placentas and postulated that these wrapped around the baby's fingers, toes, arms and legs, causing abnormalities in certain cases. His postulation was substantiated when one of his former residents delivered a child with the arm amputated above the elbow and found the amputated part embedded in the placenta. Although others had made scattered reports of such cases in the literature, he was the first to do an exhaustive search of the literature and bring it all together, culminating in a book: Fetal Malformations Caused by Amnion Rupture During Gestation, published by C.C. Thomas in 1968. The following year he published a second book on the broader aspects of his research: The Human Placenta; its Shape, Form, Origin and Development. To illustrate the different types of placentas, he had made plaster molds, exhibiting them at a number of national meetings.

His final book, published in 1974, was a result of his research relating to a revolutionary theory of classification of animals according to their method of reproduction rather than according to the Linnean system, which is based on external similarities. His hypothesis was that while animals may change their external appearances in adaptation to their environment, they cannot change their method of reproduction and therefore, all animals reproducing in the same manner, regardless of external differences, are descended from a common ancestor. This book: Reproduction in Man and His Ancestors for 700 Million Years, Augusta, McGowen Printing Co., was only a sampling of some of his theories and their applications. At his death he was still actively engaged in promoting his theory and substantiating it with research.

A portrait of Dr. Torpin hangs in the lobby of the Library of the Medical College. Painted in 1958 by George Lynch, who was at that time a student in Medical Illustration, it captures much of the warmth of Dr. Torpin's personality. The hands, usually the most difficult part of a portrait are especially well done and expressive of his career. Not only have they handled countless squalling young lives as they entered this world, they also produced a number of devices and instruments for the facilitation of his art. Among these were models for teaching and illustration and a number of instruments which were in use for many years. The instruments included the Torpin pelvimeter, the Torpin uterine packer, the Torpin insufflator and a rubber suction device for extracting the emerging fetal head in the place of forceps. Those who knew him also remember his use of his right hand, with index finger outstretched to emphasize a point which he always prefaced with "Now, see here."

Dr. Torpin's books, his research and his instruments left their mark on medicine of his time and place, but far more, his personality and teaching was felt by two decades of medical students who went out to become practitioners in Georgia and other parts of the country.

# 'Pivotal Research' by Dr. Ahlquist is Having Profound Scientific Effects

Using some research and a great deal of intuition, Dr. Raymond P. Ahlquist proposed basic scientific concepts to help students understand "some of the new drugs that just didn't fit with old ideas."

That was in the early 1940s and while Dr. Ahlquist's concepts did make it easier for students, they also have had profound effects on other scientific investigations.

Some say Dr. Ahlquist's proposal of Alpha and Beta receptors was the pivotal point for future research; others say it has led to the development of a drug which has the potential of a panacea for modern man's ills.

Propranolol is the drug. In Europe it outsells antibiotics and tranquilizers and is used in the treatment of heart attacks, chronic alcoholism, hypertension, anxiety and schizophrenia, to mention a few. Its use in the US is limited to heart conditions. But if recognized by the Food and Drug Administration, it could be as widely used as elsewhere in the world.

Yet in 1944 when Dr. Ahlquist first released the results of his observations, which he termed Alpha and Beta receptors, many ignored his paper.

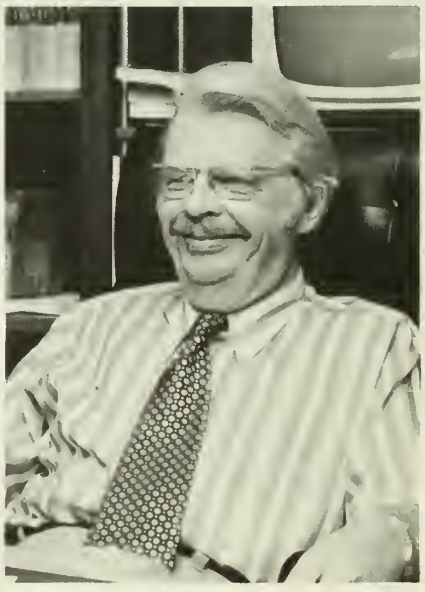
Subsequently, history has proven Dr. Ahlquist's research to be a good description of how things work and has helped stimulate further research.

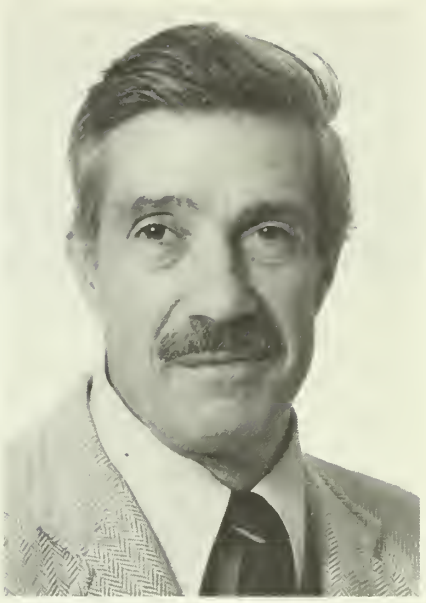
Briefly, the concepts are that Alpha receptors are associated with contraction of many smooth muscles, and Beta receptors are associated with the relaxation of some smooth muscles and with the stimulation of the heart. Specific drugs can either stimulate or block the action of these receptors.

Today, testimonials noting Dr. Ahlquist's contributions are being made. He has been invited by the Imperial Chemical Industries, Ltd., to be president of five symposiums on propranolol in Japan. The series, designed for cardiologists, will be held in Sapporo, Tokyo, Oska, Hiroshima and Kyushu early this fall. Last October he was in Rotterdam, participating in a symposium designed to present the clinical uses of propranolol and other Beta blocking compounds.

Also last October, Dr, Ahlquist was the Distinguished Visitor at the Amsterdam symposium marking the 10th anniversary of the introduction of propranolol.

Dr. Ahlquist says of his discovery, "I just cannot believe it is the equivalent to a pretty stone on the beach: If I had not found it, someone else would have. This would be true only if I were so presumptuous as to believe that Alpha and Beta receptors really exist...to me they are an abstract concept conceived to explain observed responses."





# Dr. Goodale Assumes Duties As Dean of the School of Medicine

Dr. Fairfield Goodale Jr., has assumed his duties as dean of the School of Medicine. Dr. Goodale succeeds Dr. Curtis H. Carter who returned to teaching duties last fall.

Dr. Goodale has served as pathology chairman and associate dean for curriculum at the Medical College of Virginia in Richmond.

While he officially came to the College April 1, he was in Augusta earlier, moving into a spacious, three-story brick house on Walton Way. Dr. and Mrs. (Mary Margaret) Goodale are the parents of five children, who are now of the age that they are in school most of the time, or have homes of their own.

But the house is far from empty, for the Goodales brought with them five dogs, his collection of foliage, two horses and a Spanish-speaking parrot.

Dr. Goodale earned his MD degree from Western Reserve University Medical School and has board certification in anatomic pathology and clinical pathology. He has served on the faculties of Harvard Medical School, Dartmouth College School of Medicine and Albany (New York) Medical School.

The new dean is a distinguished and widely published author and while at MCV was editor of *Medical College of Virginia Quarterly.*

While responsibilities as dean are time consuming, Dr. Goodale has found time for his favorite pastimes, tennis and gardening.

**FAIRFIELD GOODALE, JR., M.D.**

**Born:** Framingham, Mass.

**Education:**
- Milton Academy, Milton, Mass.
- Harvard College
- Adelbert College, Western Reserve University, Cleveland, Ohio
- Western Reserve University Medical School

**Military Service:**
- Army Air Force, Fighter Pilot, ETO, 1942-45

**Internship (rotating):**
- Mt. Auburn Hospital, Cambridge, Mass.

**Residency in Pathology:**
- Massachusetts General Hospital

**Chief Resident in Pathology:**
- Massachusetts General

**Fellowships:**
- Research Fellow, American Cancer Society 1954-1955
- Research Fellow, U.S. Public Health Service, St. Mary's Hospital, London, (Prof. G.W. Pickering) (HF-5174) 1955-1956
- Research Fellow, U.S. Public Health Department of Regius Professor, Oxford (HF-5174-C) (Prof. G.W. Pickering) 1956-57
- Research Fellow, U.S. Public Health Service (HF-5174-C2), Assistant in Pathology, Massachusetts General Hosp. 1957-1958

**Academic Appointments:**
- Teaching Fellow, Harvard Medical School 1954-1955
- Assistant in Pathology, Harvard Medical School 1957-1958
- Assistant Professor of Pathology, Dartmouth Medical School, Hanover, New Hampshire 1958-1960
- Associate Director of Laboratories, Mary Hitchcock Memorial Hospital & Clinic, Hanover, New Hampshire 1958-1960

**Awards:** AOA 1970
"Best" Faculty Award 1970

**National Committees:**
- Scientific Advisory Committee, Universities Associated for Research & Education in Pathology 1970
- Veterans Administration Research Evaluation Committee 1970
- Autopsy Committee (Chairman), American Association Chairman of Medical School Depts. of Pathology, Inc. 1970

**Medical Societies:**
- New England Society of Pathologists
- Virginia Society for Pathologists
- Medical Society of Virginia
- American Medical Association
- International Academy of Pathologists

- American Association of Pathologists & Bacteriologists
- College of American Pathologists, Fellow
- American Society for Experimental Pathology
- Society for Experimental Biology & Medicine
- Association of Pathology Chairmen

**Offices Held:**
- Association of Pathology Chairmen, Secretary-Treasurer 1973-1976
- Association of Pathology Chairmen—Representative to Council of Academic Societies, AAMC 1974-76
- Intersociety Pathology Council, Vice-President 1974-75
- International Academy of Pathology, Council Member 1975
- National Board of Medical Examiners, Member of Pathology Test Committee 1975-76

# Greater Understanding Evolves Through Community Dentistry

The community dentistry department of the Medical College of Georgia's School of Dentistry works to relate dental students to the dental profession early in the course of study.

Dr. James E. Williams, chairman of community dentistry, says "other dental schools have basically similar programs, but we have evolved our own mission, to get students early into the community where they will eventually practice."

This is done by treating the subject matter of traditional non-technical-skill courses, such as dental ethics, epidemiology, and communication, as practically as possible. Students are actively involved in these problem areas, says Dr. Williams.

Class hours are combined into four periods of intensified study. One week each is presented in the freshman and sophomore years, and one 3-day period each in the third and last years.

For example, students in their first week in community dentistry spend a half day visiting the homes of low income families in Augusta. In teams of three with a faculty advisor and a public health nurse, the freshmen take part in examining the teeth of the children and absorb the home situation of their patients.

What are the student's reactions to the experience? "Enthusiastic," says Dr. Williams. Pointing to a stack of student critiques of the course, he comments, "It is almost unanimous. The students feel that the experience gives them a greater understanding of real conditions in the community. It's a healthy exposure to something they didn't know."

During another half day, the students visit local dentists in their offices and discuss private practice. They also visit the dental facilities at Fort Gordon, University Hospital Outpatient Services, the Veterans Administration hospitals, the health department and the Children and Youth Clinic at MCG.

The week is ended with a seminar on dental research featuring a basic scientist involved in research that has clinical applications.

By the end of this first week students have seen the varied ways they may chose to practice dentistry. Dr. Williams says that most new dental students have been exposed to the profession only through their family dentist in private practice and these are fresh vocational possibilities to them.

In the second week of community dentistry, second year students study epidemiology and biostatistics by doing their own field study of fourth, fifth and sixth graders in a local school. Students are generally "shocked at the unmet needs they see," says Dr. Williams. "It presents a challenge for them to get with it in prevention."

Upper class students divide into four-person teams to investigate community dentistry concerns. Third year students are assigned problems in practice location and means of dental care delivery, while seniors are concerned with ethics and dental jurisprudence.

The students hear presentations by specialists in these areas each morning of the week. In the remainder of their time they research in the library, contact people working in the area of concern, and prepare a presentation of their conclusions for the class. These presentations often take the form of video-tapes of skits and role playing.

Dr. Williams adds, "That is only four weeks out of the year. The rest of the year we are busy fulfilling other MCG and community needs."

"We coordinate and administer the school's elective program. During three weeks at the end of the first three years, the students have no other classes," says Dr. Williams. This past year they had a choice of one of the 50 courses offered by faculty members or many students designed their own courses under faculty supervision.

As a sample of the broad possibilities this program offers, Dr. Williams cites that 14 students worked at Indian health stations in the Southwest and two others visited Nicaragua and Guatemala in programs of their own devising.

Another of the department's involvements is the administration of the dental portion of the Children and Youth Clinic under direction of Dr. Jack Brooks, assistant professor of community dentistry. The clinic treats 2,500 low income family children each year. Dr. Victor Della-Giustina, associate professor of community dentistry, serves as a consultant to the Department of Human Resources East-Central District. In this position he has set up cooperative teaching programs between the School of Dentistry and the Department of Human Resources such as Dental Health Week activities.

As the School of Dentistry's representative in the local community, the department consults with community leaders in setting up newly passed dental health laws and programs.

The department also assists other communities throughout the state in locating dentists to practice in their area.

# on campus

### retires

Mrs. Nellie T. English, R.N., retired December 31 after 18 years of service at the Talmadge Memorial Hospital. She served as an assistant professor, medical surgical nursing and special projects supervisor in nursing service.

### OT chief

Janet Rhoads, OTR, has been appointed chief of occupational therapy at Talmadge Memorial Hospital. She is also an instructor in the School of Allied Health Sciences. Ms. Rhoads earned an AB degree from Temple University and holds a certificate in occupational therapy from the University of Pennsylvania.

### dean selected

Dr. Dorothy T. White, dean of the School of Nursing at MCG, has been selected to participate in a project sponsored by the Southern Regional Education Board for the analysis and planning for improved distribution of nursing personnel and services.

### dental student wins

Duane E. Cox, DMD, has been named winner of the 17th Annual Block Drug Essay Contest for senior dental students. His winning paper was entitled, "Rehabilitation of Patients After Oral Cancer Therapy". He graduated in September of 1975.

### financial squeeze

President William H. Moretz adopted several economy measures in order to comply with a $274,000 budget cut ordered by the Governor and to identify $1.76 million from current funds to meet the court mandated restoration of salary increases. The measures include: 1) A hiring freeze both for new positions and for replacement of persons who resign 2) A freeze on equipment orders and book purchases 3) Permission for only mandatory State travel vital to duties 4) Operation purchases restricted to absolute essentials.

### MCG nursing in Savannah

The MCG School of Nursing has established an arm of its graduate school in Savannah. Classes are held on the Armstrong State College campus and is the result of a state-wide study to determine the educational needs of nurses in Georgia. RN's can earn their master's degree through this program.

### dental curriculum

Beginning in the fall the School of Dentistry is changing its curriculum calendar from a 12 quarter, three calendar year program to a 12 quarter, four calendar year program. The change was initiated to reduce academic pressure on the students and to provide increased clinical experience and elective courses opportunities. This also permits the students to graduate in June rather than September, enabling them to enter residency and internship programs which usually begin in July of each year.

### Family Practice Chairman

Jon C. Calvert, M.D. has been named chairman of the Department of Family Practice. He assumes the position left vacant when William Lotterhos, M.D. resigned to become assistant dean to the college of community health sciences at the University of Alabama in Tuscaloosa.

Dr. Calvert has served as assistant professor of family practice. He earned his M.D. and Ph.D. degrees from Baylor University College of Medicine and is the recipient of the first annual Distinguished Service Award of the Georgia Academy of Family Practice.

Family Practice is now occupying the newly renovated out-patient building at old university hospital. This new facility was completed at a cost of $350,000.

### nursing curriculum

A two year upper division program of professional training will be available this fall in the School of Nursing. Students will acquire all lower division general education coursework at other colleges permitting optimum use of the MCG facilities for nursing. . . . The baccalaureate satellite nursing program in Athens has been federally funded for the year and is expected to continue to grow.

# Anatomy Teaching is Increasingly Handicapped by a Lack of Cadavers

The chairman of the Medical College of Georgia anatomy department says the college is severely handicapped by a shortage of human bodies for teaching purposes.

Dr. Dale E. Bockman says that each new generation of physicians and other health professionals must study the structure of the human body to understand how it functions and how it is altered by disease.

"Yet medical educators are having an increasingly difficult time acquiring enough bodies. And, it is vital that medical institutions have a sufficient number of human bodies, or health education will be adversely affected."

Dr. Bockman adds that modern science has found no substitute for the human body, no wooden or plastic model that is just like the human body. He traces the current shortage to the fact that there are many more students entering medical school. "Ideally, we should have no more than four students per cadaver. But, as we have an increasing number of students so must we increase the number of cadavers. We now have eight students per cadaver, and it is unsatisfactory."

The anatomy chairman explains that many individuals are motivated to donate their bodies to medical science, because it's one last act they can do for the betterment of man. "Many have told me that they are donating because they can continue to 'do good.' "

The Medical College body donation program is regulated by the Uniform Anatomical Gift Act, which says anyone of legal age and sound mind may give all or part of his body to medical science, or bequests can be made by the next of kin. "We don't buy bodies, nor do we pay for body donations. Transportation, embalming and cremations are provided by the college.

"And, the students conduct a memorial service at the end of the year, eulogizing those individuals who donated."

# An Outstanding Family Practitioner Elected President of Alumni Association

**Dr. Woodrow Goss,** family practitioner, has been elected president of the School of Medicine Alumni Association.

The Ashburn practitioner assumed office at Jekyll Island during the annual dinner meeting of the association in conjunction with the Medical Association of Georgia meeting.

Dr. Goss succeeded Dr. Floyd Jarrell of Columbus as president and expressed appreciation to the outgoing president for a "year of outstanding achievement" which included more than doubling membership of the association.

The new president expressed a desire to continue the program of membership growth with emphasis upon involving more of the recent graduates.

Serving with Dr. Goss will be president-elect, Dr. Hoke Wammock of LaGrange; first vice-president, Dr. Harvey M. Newman III of Gainesville; second vice-president, Dr. Phillip R. Bartholomew, Atlanta; secretary-treasurer, Dr. Harold S. Engler, Augusta, and two new three year members of the Board of Managers, Drs. Stuart Prather, Augusta and Lamar S. McGinnis, Atlanta. Continuing to serve on the Board of Managers are two year directors, Drs. William C. Shirley, Macon and H. Calvin Jackson, Manchester and one year directors, Drs. J. Render Turner, LaGrange and David A. Wells, Dalton.

Some highlights of the meeting were the introduction of the new dean of the School of Medicine, Dr. Fairfield Goodale and his wife, Mary Margaret; comments from MCG President William H. Moretz, and recognition of the Class of 1951 which was having a reunion.

**Dr. Frank P. Anderson, Jr.,** professor of pediatrics and director of the pediatric respiratory and cystic fibrosis center at the Medical College of Georgia, died March 24 at the age of 51.

Dr. Anderson had served on the MCG faculty since 1956.

He graduated from Davidson College and received his MD degree from the Medical College of South Carolina. He received his graduate training in pediatrics at Duke Medical Center.

Dr. Anderson served on the consulting staff of University Hospital and was a member of the local and state boards of directors of the Georgia Lung Association. He also was a member of the committee on cardiopulmonary diseases in children, American College of Chest Physicians and a member of the professional education committee of the Cystic Fibrosis Foundation.

In addition, he was a member of the American College of Chest Physicians, American Thoracic Society, American Medical Association, American Association for Respiratory Therapy, Georgia Thoracic Society and the Medical Association of Georgia. For a number of years, he served as medical director of the Southeastern (Poliomyelitis) Respiratory and Rehabilitation Center.

# BOARD OF MANAGERS AUTHORIZED COMMEMORATIVE COINS

The Board of Managers of the School of Medicine Alumni Association have authorized the minting of 1,000 silver coins in commemoration of the 150th year of the Medical College of Georgia.

These coins will be numbered in order to preserve their unique and historical value. The exact cost is not known at this time but a very close estimate is $30.00 per coin. These coins are 99.9 pure silver.

In order to avoid monetary loss to the alumni association, we are asking that you pre-order these coins. The attached form will assist you in this.

These coins are being offered first to the alumni of the Medical College and, if any are unreserved, they will be offered to others.

_____Please reserve _____ Sesquicentennial silver coins for me. I will purchase these when they are minted later this year. A $10.00 deposit per coin ordered is enclosed in order to allow the association to make a deposit with the mint.

Name_____

Address_____
